

Vasiliki Doropoulou

PRODUCT ENGINEER · PARIS, FRANCE

Full-stack engineer with a strong product and UX focus. I build end-to-end product features in fast-moving environments, lead a feature squad at Ublo, and am building Inteplly as technical co-founder. *Particularly interested in reliable AI products that improve real user workflows.*

Experience

Squad Lead / Front-End Engineer · Ublo

Mar 2023 – Present

Promoted to Squad Lead in March 2026. Leading the features squad (frontend, backend, design, PM) at a proptech SaaS covering rentals, tenant workflows, invoicing, and real estate operations.

- Own the frontend of core product features (rental contracts with PandaDoc e-sign and GraphQL SSE, refunds, entity categories, tenant portal..)
- Platform-wide migrations: REST to GraphQL, Cypress to Playwright, Typesense search integration
- Internal UIKit: Storybook-based component library with design system foundations
- Domain logic refactored into reusable providers, hooks, schemas, and GraphQL layers
- Leading AI tooling transition: internal survey across 29 team members revealed fragmented adoption and a shared pain point: re-explaining Ublo context in every prompt.

Technical Co-Founder · Inteplly

Feb 2025 – Present

Building a production AI research platform for journalists and editorial teams.

Orchestrates multi-provider LLMs, RAG pipelines, and external APIs to automate news discovery, source cross-referencing, and editorial content generation.

- Multi-step RAG system across 5 core services: search, scraping, fact extraction, cross-referencing, structured generation
- Hallucination-reduction logic using controlled inputs, strict output schemas, and AI-as-judge validation
- Completion agent that stops processing when information is sufficient, cutting unnecessary API usage
- Full production infrastructure: auth, RBAC, billing, admin dashboard, cron workflows

Skills

Frontend	React, Next.js, TypeScript, Tailwind CSS, GraphQL, Styled Components, Storybook, Figma, Design Systems, localization
Backend	Node.js, Express.js, Python, REST APIs, PostgreSQL, Prisma, Redis, DDD
AI	Multi-provider LLM orchestration, AI workflow orchestration, RAG, prompt engineering, evals, human-in-the-loop design, LLM cost optimization
Product	Multi-step workflow design, human-AI collaboration patterns, UX research, conversational UI, cross-functional delivery
Tooling	Claude Code, Claude Design, v0, Figma

Education

Master 2, Design d'Interface Multimedia et Internet 2022 – 2023
Université Sorbonne Paris Nord

Thesis: AI applied to UX, NLP measuring emotional reactions in usability testing

Bachelor's, Philosophy, French Language & Literature 2016 – 2021
National & Kapodistrian University of Athens

Training

- 42 Paris: left the common core curriculum to take a full-time role at Ublo
 - Cisco Engineer Incubator 9.0 (CCNA/DevNet track, Python and network automation)
